IDAD Semi-Annual Classic Autocall April 2018

Factsheet

INVESTMENT DESCRIPTION

A 6 year investment linked to the performance of the UK, Swedish, Australian and Canadian indices.

If on any semi-annual observation date (including the Final Observation Date), starting at 12 months, all of the underlyings are at or above their initial levels, the investment will autocall. Initial capital plus the coupon for each semi-annual period which has elapsed is paid and the investment will end.

If the investment does not autocall then at the final observation date, if all underlyings are at or above 60% of their initial levels, full capital is returned.

If any underlying is below 60% of its original level at maturity, capital return will be reduced on a 1-for-1 basis. For example if the worst performing underlying has fallen to 40% of its original level, 40% of the capital will be returned and no coupon is paid.

BENEFITS

- Autocall feature potentially shortens the investment term and is triggered by minimal market growth.
- Snowballing coupon.
- Early maturity provides an opportunity to re-assess client's wealth strategy.
- Minimal market growth needed to deliver enhanced returns.
- Daily pricing.

RISKS

- The return is limited to the pre-defined investment terms.
- The coupon payment is conditional upon the underlying performance.
- There is a risk to capital should one of the underlyings breach the capital protection barrier on its Final Observation Date or in the event of an issuer default.
- Should investors need to sell their investment before maturity, the trading price will likely mean they get back less than they invested.

RATIONALE

Structured products are becoming increasingly popular for investors due to the wide variety of payoffs and levels of protection that can be achieved by the different types of structures that are available.

Autocalls have been one of the most popular structures over the years. With a classic autocall, returns are paid if all underlings are at or above the autocall trigger on an observation date.

These four underlyings have been selected in order to support the anticipated delivery of the coupons.

The autocall payoff can bring an early return of capital allowing the opportunity for a re-assessment of investment strategy. The value of this feature cannot be underestimated as it brings with it the opportunity to secure capital value, as well as the chance to take advantage of future market trends.

To manage the capital risk, a final level barrier set at 60% means an underlying must fall by more than 40% over 6 years before capital is at risk.

SUITABILITY

This product may be suitable for investors who:

- Are seeking the opportunity for higher returns than current cash rates at the time this product was launched.

- Understand the impact of global economic issues and how they will affect the product.
- Understand the criteria which will determine the coupon payments.
- Are looking to invest for the medium to long term, being happy to remain invested until maturity.
- Can afford to have their cash invested for the full term of the Product.
- Wish to use this investment as part of a well-diversified portfolio.
- Understand that the returns are pre-defined and that they will forgo any growth in the underlyings which exceeds the fixed level available with this investment product.

- Should they need to sell their investment before maturity, accept that the trading price will likely mean they get back less than they invested.

MOVEMENT IN THE UNDERLYINGS OVER A 16 YEAR PERIOD

16 Year Back-Testing

Back-testing shows how the investment would have performed historically using data from previous potential strike dates and observations. Although past performance is not an indication of future performance, it can give a factual insight into how the investment would have performed historically.

This 16 year back-test shows the historical data for a full 10 years of 6 year products that could reach the full term.

Of the 2,501 scenarios tested, 85.09% would have autocalled paying all coupons. 14.91% would reach the full term without autocalling and none would have breached the 60% final level barrier.
