

Goldman Sachs Emerging Market Autocall Accelerator July 2021 Factsheet

INVESTMENT DESCRIPTION

A 5 year investment linked to the performance of the MSCI Emerging Markets Index.

If, on the autocall observation at 36 months, the Underlying is at or above its initial level, the investment will autocall. Initial capital plus the coupon rate is paid and the investment will end.

If the investment does not autocall then at the Final Observation date, if the Underlying is above its strike level the client will receive their capital back plus 200% growth participation calculated by monthly averaging over the final 6 months. This is aimed to reduce exposure to large market drops towards the end of the term.

If the Underlying is at or above 65% of their initial level, full capital is returned.

If the Underlying is below 65% of its initial level on the Final Observation date, capital return will be reduced on a 1-for-1 basis. For example if the Underlying has fallen to 40% of its original level, 40% of the capital will be returned.

BENEFITS

- Autocall feature potentially shortens the investment term and is triggered by minimal market growth.
- Early maturity provides an opportunity to re-assess client's wealth strategy.
- Minimal market growth needed to deliver enhanced returns.
- Daily pricing.

RISKS

- The return is limited to the pre-defined investment terms.
- The coupon payment or participation is conditional upon the Underlying performance.
- Investors will be exposed to the credit risk of the Issuer. If the Issuer becomes insolvent or cannot make the payments on the Product for any other reason, investors could lose some or all of their investment. A decline in the Issuers credit quality is likely to reduce the market value of the Product and therefore the price an investor may receive for the Product if they were to sell them in the market.
- Should investors need to sell their investment before maturity, the trading price will likely mean they get back less than they invested.

RATIONALE

Structured products are becoming increasingly popular for investors due to the wide variety of payoffs and levels of protection that can be achieved by the different types of structures that are available.

The aim of the Autocall Accelerator is to deliver a competitive coupon rate if autocalled or deliver enhanced participation in any growth of the Underlying at maturity.

The Underlying used in this product has been selected in order to support the anticipated delivery of enhanced growth.

The autocall payoff can bring an early return of capital allowing the opportunity for a re-assessment of investment strategy. The value of this feature cannot be underestimated as it brings with it the opportunity to secure capital value, as well as the chance to take advantage of future market trends.

To manage the capital risk, a final level barrier set at 65% means an Underlying must fall by more than 35% over 5 years before capital is at risk.
