Triple Index Low Hurdle Autocall April 2022

Factsheet

INVESTMENT DESCRIPTION

A 6 year investment linked to the performance of European, US and Japanese Indices.

If on any semi-annual early observation date, starting at 12 months, all of the Underlyings are at or above the Autocall Trigger, the investment will autocall. Initial capital plus the coupon for each semi-annual period which has elapsed is paid and the investment will end.

If the investment does not autocall early then at the final observation date, if all Underlyings are at or above 90% of their initial levels, full capital is returned and all of the accumulated coupons are paid (Low Hurdle). If any Underlying is below 90% of its original level but above 65% then full capital is returned.

If any Underlying is below 65% of its original level at maturity, capital return will be reduced on a 1-for-1 basis. For example if the worst performing Underlying has fallen to 40% of its original level, 40% of the capital will be returned.

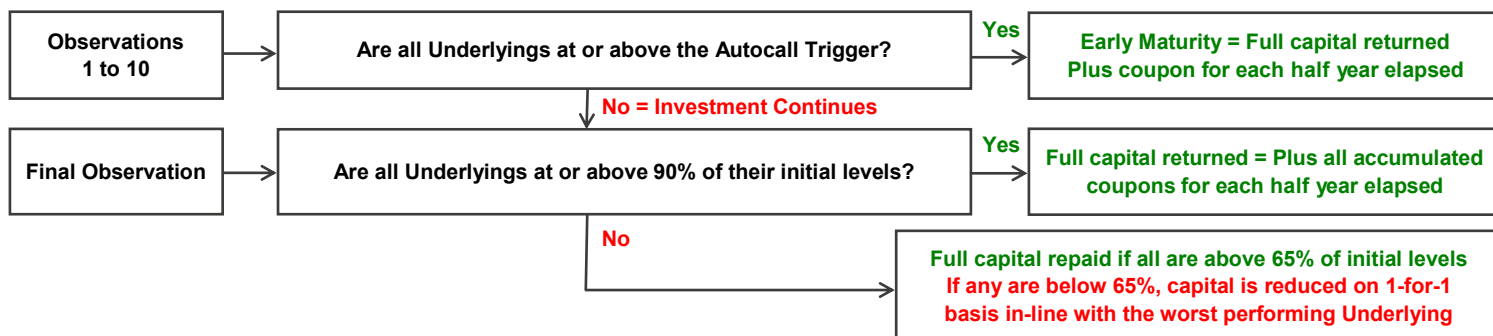

BENEFITS

- Autocall feature potentially shortens the investment term and is triggered by minimal market growth.
- The Low Hurdle feature gives an increased chance of gains at full term.
- Early maturity provides an opportunity to re-assess client's wealth strategy.
- Minimal market growth needed to deliver enhanced returns.
- Daily pricing.

RISKS

- The return is limited to the pre-defined investment terms.
- The coupon payment is conditional upon the Underlying performance.
- There is a risk to capital should one of the Underlyings breach the capital protection barrier on its Final Observation Date or in the event of an issuer default.
- Investors will be exposed to the credit risk of the Issuer. If the Issuer becomes insolvent or cannot make the payments on the Product for any other reason, investors could lose some or all of their investment. A decline in the Issuers credit quality is likely to reduce the market value of the Product and therefore the price an investor may receive for the Product if they were to sell them in the market.
- Should investors need to sell their investment before maturity, the trading price will likely mean they get back less than they invested.

RATIONALE

Structured products are becoming increasingly popular for investors due to the wide variety of payoffs and levels of protection that can be achieved by the different types of structures that are available.

Autocalls have been one of the most popular structures over the years, although with a classic autocall, returns are only paid if all Underlyings are at or above the autocall trigger. Adding the 90% Low Hurdle barrier at maturity increases the chances of gains at full term.

The three Underlyings have been selected in order to support the anticipated delivery of the coupons.

The autocall payoff can bring an early return of capital allowing the opportunity for a re-assessment of investment strategy. The value of this feature cannot be underestimated as it brings with it the opportunity to secure capital value, as well as the chance to take advantage of future market trends.

To manage the capital risk, a final level barrier set at 65% means an Underlying must fall by more than 35% over 6 years before capital is at risk.

SUITABILITY

This product may be suitable for investors who:

- Are seeking the opportunity for higher returns than current cash rates at the time this product was launched.
- Are seeking growth rather than income.
- Understand and accept there is a risk to capital and how the Capital Protection Barrier works.
- Understand the impact of global economic issues and how they will affect the product.
- Understand the criteria which will determine the coupon payments.
- Are looking to invest for the medium to long term, being happy to remain invested until maturity.
- Can afford to have their cash invested for the full term of the Product.
- Wish to use this investment as part of a well-diversified portfolio.
- Understand that the returns are pre-defined and that they will forgo any growth in the Underlyings which exceeds the fixed level available with this investment product.
- Understand the risk to capital in the event of a counterparty default.
- Should they need to sell their investment before maturity, accept that the trading price will likely mean they get back less than they invested.
- Appreciate that the coupon payment is conditional but understand that the Low Hurdle feature can deliver gains at a lower percentage trigger at full term.
