

## INVESTMENT DESCRIPTION

A 6 year investment linked to the performance of European, Japanese and Hong Kong indices.

If on any semi-annual observation date (including the Final Observation date), starting at 12 months, all of the Underlyings are at or above the Autocall Trigger, the investment will autocall. Initial capital plus the coupon for each semi-annual period which has elapsed is paid and the investment will end.

If the investment does not autocall, then at the Final Observation date, if all Underlyings are at or above the Capital Protection Barrier, full capital is returned.

If any Underlying is below the Capital Protection Barrier on the Final Observation date, capital return will be reduced on a 1-for-1 basis. For example if the worst performing Underlying has fallen to 40% of its original level, 40% of the capital will be returned.

## BENEFITS

- Autocall feature potentially shortens the investment term and is triggered by minimal market growth.
- Snowballing coupon.
- Early maturity provides an opportunity to re-assess client's wealth strategy.
- Minimal market growth needed to deliver enhanced returns.
- Daily pricing.

## RISKS

- The return is limited to the pre-defined investment terms.
- The coupon payment is conditional upon the Underlying performance.
- Investors will be exposed to the credit risk of the Issuer. If the Issuer becomes insolvent or cannot make the payments on the Product for any other reason, investors could lose some or all of their investment. A decline in the Issuer's credit quality is likely to reduce the market value of the Product and therefore the price an investor may receive for the Product if they were to sell them in the market.
- Should investors need to sell their investment before maturity, the trading price will likely mean they get back less than they invested.

**RATIONALE**

Structured products are becoming increasingly popular for investors due to the wide variety of payoffs and levels of protection that can be achieved by the different types of structures that are available.

Autocalls have been one of the most popular structures over the years. With a classic autocall, returns are paid if all Underlyings are at or above the autocall trigger on an observation date.

The Underlyings detailed overleaf have been selected in order to support the anticipated delivery of the coupons.

The autocall payoff can bring an early return of capital allowing the opportunity for a re-assessment of investment strategy. The value of this feature cannot be underestimated as it brings with it the opportunity to secure capital value, as well as the chance to take advantage of future market trends.

To manage the capital risk, a final level barrier set at 70% means an Underlying must fall by more than 30% over its term before capital is at risk.

**SUITABILITY**
