

SOCIETE GENERALE BANKS REDUCING AUTOCALL

FEBRUARY 2023 FACTSHEET

Stock Note Risk Profile: There is a higher risk of large or total capital losses when Underlyings are individual Company Stocks rather than Stock Market Indices. Retail investors should seek suitable financial advice before investing.

TARGET RETURN: USD = 18.00% p.a.

INVESTMENT DESCRIPTION

A 4 year investment linked to the performance of four Global Banks.

If on any quarterly observation dates (including the Final Observation date), starting at 12 months, all of the Underlyings are at or above the Autocall Trigger, the investment will autocall. Initial capital plus the coupon for each quarterly period which has elapsed is paid and the investment will end.

If the investment does not autocall then at the Final Observation date, if all Underlyings are at or above the Capital Protection Barrier, full capital is returned.

If any Underlying is below the Capital Protection Barrier on the Final Observation date, capital return will be reduced on a 1-for-1 basis. For example, if the worst performing Underlying has fallen to 40% of its original level, 40% of the capital will be returned.

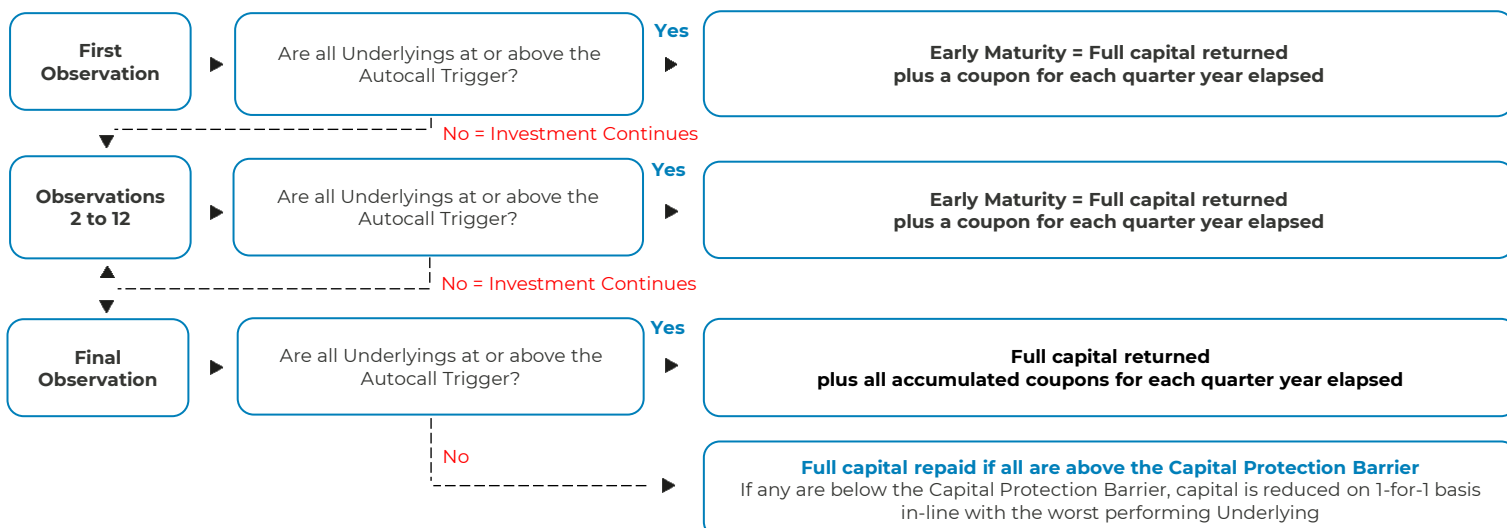

BENEFITS

- Snowballing coupon.
- Even slightly negative market performance can deliver enhanced returns.
- Autocall feature potentially shortens the investment term.
- Early maturity provides an opportunity to re-assess client's wealth strategy.
- Daily pricing.

RISKS

- The return is limited to the pre-defined investment terms.
- The coupon payment is conditional upon the Underlying performance.
- **There is a higher risk of large or total capital losses when Underlyings are individual Company Stocks rather than Stock Market Indices.**
- Investors will be exposed to the credit risk of the Issuer. If the Issuer becomes insolvent or cannot make the payments on the Product for any other reason, investors could lose some or all of their investment. A decline in the Issuers credit quality is likely to reduce the market value of the Product and therefore the price an investor may receive for the Product if they were to sell them in the market.
- There is a risk to capital should one of the Underlyings breach the Capital Protection Barrier on its Final Observation date.
- Should investors need to sell their investment before maturity, the trading price will likely mean they get back less than they invested.

RATIONALE

Structured products are becoming increasingly popular for investors due to the wide variety of payoffs and levels of protection that can be achieved by the different types of structures that are available.

Autocalls have been one of the most popular structures over the years. With a defensive autocall, returns are paid if all Underlyings are at or above the Autocall Trigger on an observation date.

The Underlyings used in this Product have been selected in order to support the anticipated delivery of the product strategy.

The autocall payoff can bring an early return of capital allowing the opportunity for a re-assessment of investment strategy. The value of this feature cannot be underestimated as it brings with it the opportunity to secure capital value, as well as the chance to take advantage of future market trends.

To manage the capital risk, a final level barrier set at 50% means an Underlying must fall by more than 50% over the full term before capital is at risk.

SUITABILITY

This product may be suitable for investors who:

- Understand that there is a higher risk of large or total capital losses when Underlyings are individual Company Stocks rather than Stock Market Indices.

- Are seeking growth rather than income.
- Understand and accept there is a risk to capital and how the Capital Protection Barrier works.
- Understand the impact of global economic issues and how they will affect the product.

- Wish to use this investment as part of a well-diversified portfolio.
- Understand that the returns are pre-defined and that they will forgo any growth in the Underlyings which exceeds the fixed level available with this investment product.
- Understand the risk to capital in the event of a counterparty default.
- Should they need to sell their investment, accept that the trading price will likely mean they get back less than they invested.
