

BBVA FIXED INCOME AUTOCALL

NOVEMBER 2025 FACTSHEET

Target Return: 28.44% p.a.

Stock Note Risk Profile: There is a higher risk of large or total capital losses when Underlyings are individual Company Stocks rather than Stock Market Indices. Retail investors must seek suitable financial advice before investing.

Investment Description

A 1 year investment linked to the performance of technology stocks. This product will pay a fixed (guaranteed) coupon monthly, irrespective of the performance of the underlying stocks. This investment will autocall and mature early if all Underlyings are equal to or above the Autocall Trigger on any monthly observation date starting at 6 months. If early maturity occurs, full capital is returned and the investment will end. If early maturity does not occur the investment will continue to the Final Observation date. At the Final Observation date, if the all Underlyings are at or above the Capital Protection Barrier, then full capital is returned. If any Underlying is below the Capital Protection Barrier, capital return will be reduced on a 1-for-1 basis. For example, if the Underlying has fallen to 40% of its original level, 40% of the capital will be returned.

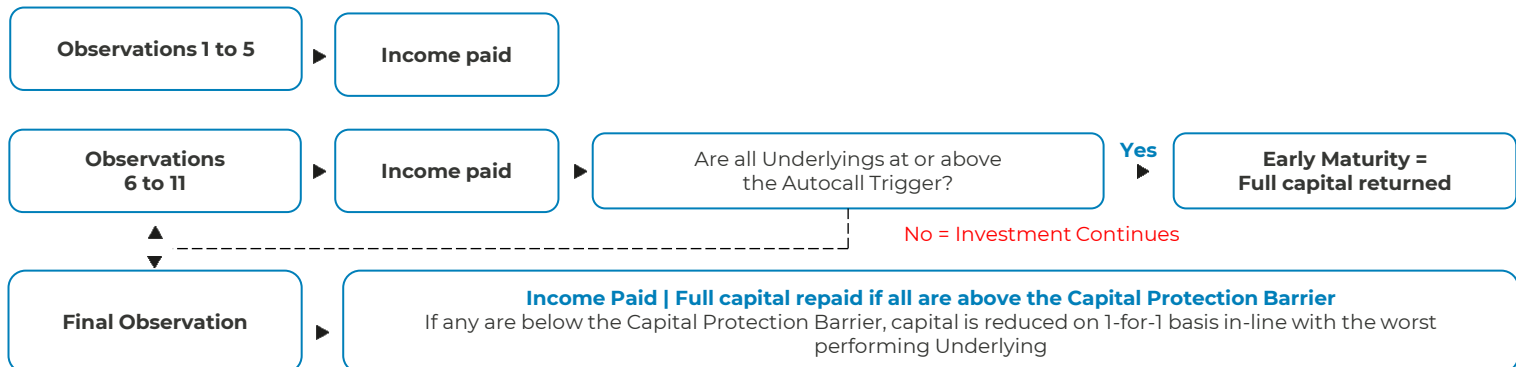

Benefits

- Opportunity for regular income payments.
- Coupons are guaranteed and are not dependant on the performance of the Underlyings.
- Autocall feature potentially shortens the investment term.
- Early maturity provides an opportunity to re-assess client's wealth strategy.
- Daily pricing.

Risks

- The return is limited to the pre-defined investment terms.
- There is a risk to capital should one of the Underlyings breach the Capital Protection Barrier on its Final Observation date.
- **There is a higher risk of large or total capital losses when Underlyings are individual Company Stocks rather than Stock Market Indices.**
- Investors will be exposed to the credit risk of the Issuer. If the Issuer becomes insolvent or cannot make the payments on the Product for any other reason, investors could lose some or all of their investment. A decline in the Issuers credit quality is likely to reduce the market value of the Product and therefore the price an investor may receive for the Product if they were to sell them in the market.
- Should they need to sell their investment, accept that the trading price will likely mean they get back less than they invested.

Rationale

Structured products are becoming increasingly popular for investors due to the wide variety of payoffs and levels of protection that can be achieved by the different types of structures that are available.

The opportunity for an income stream can be of key importance to investors as part of their wealth planning.

Having a fixed coupon rather than conditional coupon means the investor can plan other investments knowing that these coupons are guaranteed.

To manage the capital risk, a final level barrier set at 60% means an Underlying must fall by more than 40% over the full term before capital is at risk.

Suitability

This product may be suitable for investors who:

- Understand that there is a higher risk of large or total capital losses when Underlyings are individual Company Stocks rather than Stock Market Indices.

- Are seeking income rather than growth.
- Understand and accept there is a risk to capital and how the Capital Protection Barrier works.
- Understand the impact of global economic issues and how they will affect the product.
- Understand the criteria which will determine the coupon payments.

- Can afford to have their cash invested for the full term of the Product.
- Wish to use this investment as part of a well-diversified portfolio.
- Understand that the returns are pre-defined and that they will forgo any growth in the Underlyings which exceeds the fixed level available with this investment product.
- Understand the risk to capital in the event of a counterparty default.
- Should they need to sell their investment, accept that the trading price will likely mean they get back less than they invested.
