Citi 55-55 Memory Income Autocall

NOVEMBER 2026 FACTSHEET

Target Return: **GBP = 12.50% p.a.**

Stock Note Risk Profile: There is a higher risk of large or total capital losses when Underlyings are individual Company Stocks rather than Stock Market Indices. Retail investors must seek suitable financial advice before investing.

Investment Description

A 2.5 year investment linked to the performance of Broadcom, GE Vernova and Qualcom.
If on any of the monthly observation dates, including the Final Observation Date, the closing levels of all the Underlyings are at or above the Income Trigger, the coupon will be paid plus any previously missed coupon payments.

This investment will autocall and mature early if all Underlyings are equal to or above the Autocall Trigger on any monthly observation date starting at 6 months. If early maturity occurs, full capital is returned and the investment will end. If early maturity does not occur, the investment will continue to the Final Observation Date.

If any Underlying is below the Capital Protection Barrier on the Final Observation date, capital return will be reduced on a 1-for-1 basis, calculated with reference to the worst-performing Underlying. For example, if the worst-performing Underlying has fallen to 40% of its original level, 40% of the capital will be returned.

Benefits

- Opportunity for regular income payments even where the Underlyings show significant falls.
- A memory feature whereby income previously unpaid will be included when the income trigger is next activated.
- Autocall feature potentially shortens the investment term.
- Early maturity provides an opportunity to reassess client's wealth strategy.
- Daily pricing.

Risks

- The return is limited to the pre-defined investment terms.
- The income payment is conditional upon the Underlying performance.
- **There is a higher risk of large or total capital losses when Underlyings are individual Company Stocks rather than Stock Market Indices.**
- Investors will be exposed to the credit risk of the Issuer. If the Issuer becomes insolvent or cannot make the payments on the Product for any other reason, investors could lose some or all of their investment. A decline in the Issuer's credit quality is likely to reduce the market value of the Product and therefore the price an investor may receive for the Product if they were to sell it in the market.
- There is a risk to capital should one of the Underlyings breach the Capital Protection Barrier on its Final Observation date.
- Investors who sell before maturity may receive less than their original investment.

Rationale

Structured products are becoming increasingly popular for investors due to the wide variety of payoffs and levels of protection that can be achieved across the different types of structures that are available.

The opportunity for an income stream can be of key importance to investors as part of their wealth planning. The probability of an income payment being triggered is increased with this investment as an Underlying needs to show a fall of 45% from its initial level on any observation date before the income stream is disrupted. The investment also benefits from a memory feature so that if any income payments have been missed, they will be paid on the next Observation Date that all Underlyings are at or above the Income Trigger.

The autocall payoff can bring an early return of capital allowing the opportunity for a re-assessment of investment strategy.

To manage the capital risk, a final level barrier set at 55% means an Underlying must fall by more than 45% over the full term before capital is at risk.

Suitability

This product may be suitable for investors who:

- **Understand that there is a higher risk of large or total capital losses when Underlyings are individual Company Stocks rather than Stock Market Indices.**
- Are seeking the opportunity for higher returns than current cash rates at the time this product was launched.
- Are seeking income rather than growth.
- Understand and accept there is a risk to capital and how the Capital Protection Barrier works.
- Understand the impact of global economic issues and how they will affect the product.
- Understand the criteria which will determine the income payments.
- Are looking to invest for the medium to long term, being happy to remain invested until maturity.
- Can afford to have their cash invested for the full term of the Product.
- Wish to use this investment as part of a well-diversified portfolio.
- Understand that the returns are pre-defined and that they will forgo any growth in the Underlyings which exceeds the fixed level available with this investment product.
- Understand the risk to capital in the event of a counterparty default.
- Should they need to sell their investment, accept that the trading price will likely mean they get back less than they invested.
- Appreciate that income payments are conditional but understand that the memory feature can deliver previously missed income payments.
